

Position Titles: Computer Systems Analyst II and III

Location: New Orleans, LA

Modus21 is a Charleston, South Carolina based business and technology consulting firm specializing in solving complex business problems for global business and government clients. Our philosophy is simple – provide value to our clients through the ability to streamline, measure, and improve their business processes via business intelligence and business architecture. Our expertise has proven highly successful in helping organizations recognize greater value by aligning their strategy and objectives to technology and execution.

Scope of Work:

The Computer Systems Analyst II and III roles will support the DC2HS Database, Cyber Security, and Engineering project at SPAWARSSYSCEN Atlantic location in New Orleans, LA. Contractor support for the SPAWARSSYSCEN Atlantic DC2HS shall include system engineering, cyber security, Certification and Accreditation (C&A), and database administrator support across the following technical areas: Windows, Unix, Linux, Network, Network Security, Storage and Storage Area Networks (SAN)s, Domain Name Services (DNS), Backups, Databases, and Virtualization including Hypervisor and Application. This effort is contingent upon award.

Essential Functions:

Candidates must possess three (3) to five (5) years of "Specific Project" Computerized System experience, to include: Test and Evaluation, Network Protocols, LAN administration fundamentals, and UNIX and Windows based operating system.

Responsibilities:

- Drive and quantify continuous improvement through standardization and innovation.
- Coordinate and provide input on MFOM software product development.
- Drive configuration, development and build of systems and solutions using the vendor platform.
- Document high-level business workflows and transform into low-level technical requirements.
- Think outside the box and come up with improvement and efficiency opportunities to streamline business and operational workflows.
- Participates in configuring complex software products as per the customer/system requirements and create test cases to ensure quality.
- Involved in design, development, maintenance and sustainment activities that involve troubleshooting (System, Platform, and Application).
- Participate in software maintenance in software engineering is the modification of a software product after delivery to correct faults, to improve performance or other attributes.
- Modify the system to cope with changes in the software environment (DBMS, OS).
- Implement new or changed user requirements which concern functional enhancements to the software.
- Diagnose and fix errors.
- Increase software maintainability or reliability to prevent problems in the future.
- Other duties as assigned

Requirements/Experience:

- Currently holds a Department of Defense (DoD) Secret Security Clearance and has the ability to obtain a Top Secret (TS) Sensitive Compartmented Information (SCI) clearance.
- Certifications for Windows, Linux, Unix, Networking, Virtualization, Storage, Security, Security+ and Citrix a plus
- Previous experience with DC2HS a plus.
